

NITHESH B NAIK

Software Engineer — Full-Stack & AI

Bengaluru, Karnataka · 8861106739 · nitheshbnaik@gmail.com · [GitHub](#) · [LinkedIn](#)

Computer Science Engineering graduate (April 2026, CGPA 8.48) with full-stack and AI engineering experience across React, Next.js, Node.js, Python, and Java. Open to Software Engineering, Full-Stack, Backend, and AI/ML roles. Six independently shipped projects, a production internship, and a merged open-source contribution.

EDUCATION

B.E. in Computer Science and Engineering SalT, Bangalore CGPA: 8.48/10 · Graduated: April 2026

XII M.E.S P.U College, Sirsi, Karnataka 82%

EXPERIENCE

Software Developer Intern — Xcelerator, Bengaluru · Jan — Apr 2026

NammaDiscover — hyper-local Karnataka tourism platform

- Built and shipped full-stack features end-to-end (Next.js, Tailwind CSS, Node.js, Express.js) for a live production tourism platform.
- Designed and implemented secure REST APIs with JWT authentication and role-based access control for differentiated user permissions.
- Optimized MongoDB aggregation pipelines and geospatial queries to power fast, location-based content retrieval at scale.
- Engineered an independent video-lifecycle module (upload, processing, storage, playback) using FFmpeg and Cloudinary, later integrated into the core platform.
- Participated in sprint planning, code reviews, and cross-functional collaboration with the development team.

PROJECTS

Nexus-Agent — Autonomous AI Career Platform

Python · React · Node.js · LangGraph · CrewAI · LlamaIndex · Gemini API

- Architected a 4-agent multi-agent system (Scout, Matchmaker, Tailor, Critic) that autonomously scrapes job postings, matches experience, and generates tailored resumes, cutting a 45-minute manual process to under 2 minutes.
- Implemented Retrieval-Augmented Generation (RAG) via LlamaIndex and Gemini embeddings to ground outputs in real, structured data.
- Engineered a local regex/NER PII-redaction layer that strips sensitive data before any external LLM call, reinserting it only at final output.
- Built a React frontend streaming live backend execution logs via Server-Sent Events.

MailGun — Distributed Email Dispatch Platform

Node.js · BullMQ · Redis · Docker · React

- Architected an event-driven, queue-based backend (API server + BullMQ worker communicating via Redis), designed for 400K+ batch scale with horizontal worker scaling via Docker Compose.
- Implemented multi-provider SMTP rotation (Gmail, Brevo, Mailjet) with round-robin quota management, and cross-process job control (pause/resume/stop) via Redis Pub/Sub.
- Built a React + Vite dashboard for CSV upload and live job monitoring, and conducted a formal self-audit of the architecture, documenting real operational gaps and trade-offs.

Event Judging & Management System

Node.js · Express · MySQL · Redis

- Built a real-time scoring platform handling 1,000+ concurrent participants across multi-judge panels, sustaining 99.9% uptime with zero data drift via Redis caching.
- Implemented strict backend data-validation rules to prevent unauthorized score manipulation, ensuring full data integrity and auditability.
- Cut manual coordination workload by ~70% and result-compilation time by 50% through automated validation and real-time dashboards.

Smart Expense Tracker API

Python · FastAPI · Pytest · GitHub Actions

- Built a full CRUD REST API in a 48-hour take-home challenge using staged, individually reviewed commits.
- Wrote a complete automated test suite (Pytest) and wired it into a GitHub Actions CI pipeline running on every push.
- Documented every AI-assisted development decision transparently, what was generated, validated, or rejected.

SafeHer — Women's Safety Web Application

Node.js · Express · MongoDB · Socket.io

- Built a real-time SOS system using Socket.io, broadcasting live location to emergency contacts via the Twilio/SMS API.
- Designed a MongoDB schema optimized for high-concurrency, low-latency nearest-safe-zone queries.

Vriddhi — Inventory & Billing App

React Native · Redux Toolkit · AsyncStorage

- Built a cross-platform, mobile app for shopkeepers, syncing transactional data to MongoDB automatically once connectivity returns.
- Designed visual analytics (sales, low-stock alerts, cash flow) for non-technical users.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (ES6+), C/C++, SQL

Frontend: React.js, Next.js, React Native, Redux, Tailwind CSS, GSAP

Backend: Node.js, Express.js, Django, FastAPI, REST APIs, BullMQ

AI / ML: LangGraph, CrewAI, LlamaIndex (RAG), Gemini API, Prompt Engineering, Agentic Workflows

Databases: MongoDB, PostgreSQL, MySQL, SQLite, Redis

Cloud & DevOps: AWS (exposure), Docker, Docker Compose, Git, GitHub Actions, Jenkins, Linux/Command-line

Testing: Pytest, Unit Testing, CI/CD

CERTIFICATIONS & ACHIEVEMENTS

- Neo4j Certified Professional
- Power BI and Data Visualization Certified
- Cloud Infrastructure Management and Automation Certified
- Robotic Process Automation (RPA) Certified - UiPath
- Merged open-source contribution - freeCodeCamp (main branch)
- Lead developer in a 3-member agile team - owned code reviews, architecture decisions, and CI/CD pipeline
- Hackathon Participant - OxDAY, IBM 24-Hour Hackathon
